MINI PROJECTS

1.URL Shortener — Detail

An URL shortener is a website that reduces the length of your URL (Uniform Resource Locator). The idea is to minimize the web page address into something that's easier to remember and track.

2.: Develop a web page using Angular 2+ for Registration — *Detail*

With the help of this form , we can register any user .
Field should be mandatory with red Asterisk (*) sign in the form , There should be validation on form fields .
When we hit the ' url+ "/registration" ' endpoint, registration page should open, on filling and submitting the values of the form, All values should be printed on console in JSON format.
